

AMEISE NEW LABEL HOW-TO

File Format: TIFF, CMYK, 300 or 600 dpi, LZW-Compression

Dimension: 91mm x 91mm

You should start with an empty, square layout.

Please don't draw circles into the layout or cut it out round! No Markers please only a small cross in the center.

Everything visible in your design will get printed.

The dashed lines describe the needed tolerance (bleed), it's 3mm on each side.

Background patterns, images or solid colors should be 91mm x 91mm.

If you are using e.g. Photoshop make sure that the file is saved in CMYK-Mode

We only do CMYK these days. Every label will get a 4-colour Euroscale print.

Only one layer please. No JPG please. Have a look at the sample labels.
